15 Learning Videos for Toddlers | Animal Sounds, Farm Animals, Learn Colors, 318M 180m
Numbers, Words | Speech

The **top 10 videos** earn **40% of all channel views**. The median video has 59M views. Two "Baby Learning" videos alone have 3.3B. This is an **evergreen, replay-driven** channel: parents put the same video on again and again, for years.

01 Title Patterns

Titles are not hooks. They are **search and parent-intent keyword stacks**. A parent types "baby learning video" or "toddler speech" and this is what they find.

[Audience] Learning with [Host] Learn to Talk First Words Speech Delay
Milestones [Song] + More Nursery Rhymes Sign Language

- **Speech-goal keywords are the strongest topic.** Median views for titles containing "Learn to Talk" are 224M, "Colors" 220M, "Speech" 195M and "First Words" 183M. The channel's overall median is 59M.
- **Audience in the first 2 words:** "Baby Learning...", "Toddler Learning...". The parent instantly knows it fits their kid's age.
- **Song-led titles** borrow famous public-domain songs ("Wheels on the Bus + More...", "Hop Little Bunnies + More") to capture nursery-rhyme search.
- **Long, piped keyword tails:** "- Nursery Rhymes & Kids Songs - Speech Practice - Videos for Toddlers".

TITLE TEMPLATES

1. [Baby/Toddler] Learning with [Host] - [Skill], Songs & Nursery Rhymes - [Audience] Videos
2. Learn to Talk with [Host] - [First Words / First Sentences] - Speech Practice for Toddlers
3. [Famous Nursery Rhyme] + More Nursery Rhymes & Kids Songs - [Host]
4. Learn [Animals/Colors/Numbers] with [Host] - [Sub-topic] - Toddler Learning Video

Thumbnail Analysis

Locked formula, used on almost every video:

- **Host on the right third**, mid-chest-up, huge open-mouth smile, wide eyes, hands on cheeks or pointing. She is always in the same outfit: pink shirt, denim overalls, pink headband. **The character's look is the brand.**
- **Big chunky title text on the left** (2–4 words, black or red with a white outline): "BABY LEARNING", "TALKING TIME!", "First Words".
- **A speech bubble with the target word**, e.g. Say, "Mama!" or Say, "BALL!". It shows the parent the payoff (speech) in one glance.
- **A round runtime badge** top-right ("60 min", "2 HR") tells parents this video will last a while.
- **Bright flat backgrounds** (lime green, sky blue, mint, pastel yellow) plus 1–3 familiar toddler objects: blocks, a ball, a bottle, farm animals, a bus.

#1 Baby Learning With Ms Rachel - First Words, Songs and Nursery Rhymes for Babies - Toddler Videos

#2 Baby Learning with Ms Rachel - Baby Songs, Speech, Sign Language for Babies - Baby Videos

#3 Wheels On The Bus + More Nursery Rhymes & Kids Songs - Educational Videos for Kids & Toddlers

#4 Learn Animals with Ms Rachel for Toddlers - Animal Sounds, Farm Animals, Nursery Rhymes & Kids Songs

#5 Talking Time with Ms Rachel - Baby Videos for Babies and Toddlers - Speech Delay Learning Video

#6 Hop Little Bunnies Hop Hop Hop + More Ms Rachel Nursery Rhymes & Kids Songs

#7 Baby's First Words with Ms Rachel - Videos for Babies

#8 Learn to Talk with Ms Rachel - Videos for Toddlers - Nursery

03

Hook Structures

This audience doesn't need a curiosity hook. A toddler stays because of **direct eye contact + a familiar greeting song + their name being "called"**, and the parent stays because the video feels safe.

- **Opening greeting/hello song** (same every episode). It works as a ritual signal: "it's Ms Rachel time".
- **Direct address to camera** right away: "Hi! Can you wave hi?" followed by a **pause** for the child to respond.
- **The first activity starts within ~30-60s**. There is no intro talk aimed at adults.

04

Script Format

- **Modular segments** of about 1-4 minutes each, rotating between a **song**, a **speech practice** beat (model the word → pause → praise), a **toy/object reveal** ("What's inside?"), **animals and sounds, colors, numbers or letters, sign language**, and gross-motor moves ("Can you jump?").
- **Speech-therapy techniques built in:** slow, exaggerated "parentese" speech, single words and two-word phrases, sounds broken down ("b-b-ball"), **long expectant pauses** (3-5s of silence for the child to answer), and lots of praise ("You did it!").
- **Heavy repetition:** each target word comes back 3-5 times per segment and again in later segments.
- **Recurring cast:** a puppet (Herbie), a few helpers, and guest crossovers (Blippi, at 325M views).
- **No mid-roll "subscribe" asks** aimed at kids. Calls to action are in the description and aimed at parents.

05

Pacing & Story Arc

- **Length is a feature:** 49 of 126 videos run 40-70 min and 15 run over 70 min. The average is 43 min. More minutes per session means more ad slots, and replays build watch time.
- **Slow pace on purpose:** few cuts, long holds on the host's face, ~100-120 wpm with long pauses. It is the opposite of hyper-stimulating kids' content, and that is a big part of why parents trust it.
- **"Arc" = an energy cycle, not a story:** high-energy song → calm speech practice → movement → calm → song. It repeats every 5-8 min, and the video closes with a goodbye song.

What Makes It Work

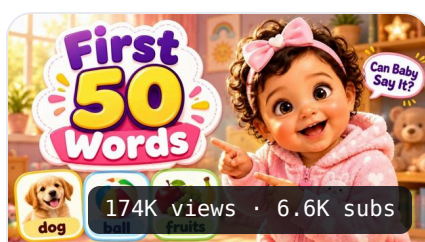

The one replicable mechanism: *a single, consistent, warm on-screen character who talks directly to the child, models words slowly, pauses for them to answer, and repeats, packaged as long, keyword-titled videos that parents trust and replay.*

- **Parent-intent positioning** ("speech delay", "learn to talk", "milestones") turns it into a *tool*, not just entertainment. Parents choose it deliberately and recommend it to other parents.
- **Recognizable character** (outfit, voice, catchphrases) that toddlers point to and ask for.
- **Evergreen and replayable:** 2023 videos still pull hundreds of millions of views.

vidIQ: Breakout Videos From Small Channels

This is the most important finding. **Brand-new, faceless, AI-animated channels are already breaking out** in this exact niche. Channels with only **1,400–6,600 subscribers** got **170K–210K views** on single "First Words" videos published in the last few months.

- **Winning topic: "First Words" lists.** "30 First Baby Words", "First 50 Words" and "50 First Baby Words" appear again and again. It's the same speech niche Ms Rachel owns, but AI channels are winning with short list-style videos.
- **Winning look: Pixar-style 3D babies and toddlers** with big eyes, soft lighting, cozy nurseries or sunny farms, baby animals, and a giant colorful number ("30", "50") with bubbly text.
- **Short videos work for new channels:** the breakouts are 3–12 min long, while Ms Rachel's are 30–60 min. Short videos get a new channel discovered; long compilations are what you build once you have a library.
- **Tags copy Ms Rachel:** the #1 breakout (3,816×) is tagged *#msrachel* *#songsforlittles*. People do this, but it risks spam / misleading-metadata strikes. **Don't copy it.**

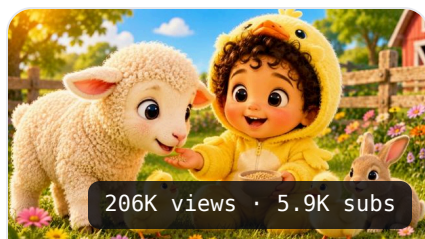

358× breakout · Baby's First 50 Words! Learn to Talk & Say New Words (Doodle The Dinomite, 7 min)

110× breakout · 30 First Baby Words for Toddlers and Babies | Learn to Talk (enjoylearningkids, 5 min)

115× breakout · 50 First Baby Words for Babies & Toddlers | Learn to Talk & Speak (NuMo, 7 min)

826× breakout · Baby Feeds Cute Baby Animals! | Learn Animals & Food for Toddlers (Genie Rhymes, 12 min)

265× breakout · Baby Learns Fruits & Vegetables with Cute Baby Animals! (My teacher Miley, 3 min)

1,774× breakout · ABC Song for Kids | 40 Minutes Alphabet Songs & Phonics (Cocomo Studio, 40 min)

"Breakout" = how many times more views the video got than that channel normally gets. Data: vidIQ outliers, English titles, channels under 2M subs, published in the last 12 months.

vidIQ: Keyword Opportunities

Monthly YouTube searches (worldwide and US), competition (0–100, lower = easier) and growth vs. last month. **Best mix = high searches + low competition + growing.**

KEYWORD	SEARCHES / MO	US / MO	COMPETITION	TREND
toddler learning video	169,147	51,013	56	+30%
educational videos for toddlers	100,602	17,246	47.5	+57%
baby sensory video	85,194	29,377	39.9	–26%
preschool learning videos	82,592	11,799	38.1	–40%
learning videos for toddlers	79,979	23,697	47	+3%
baby learning videos	77,354	8,925	51.5	–3%
baby learning	47,568	3,085	57	+64%
speech therapy	45,507	10,502	34.8	+133%
baby first words	24,470	—	59.5	+64%
learn to talk for toddlers	13,449	—	41	+241%
first words	13,656	—	60.5	+164%
baby learning video	10,825	—	46.5	+43%
speech delay	4,341	—	42.4	—

WHAT THIS MEANS

- **"Learn to talk for toddlers"** is up **+241%** with low competition (41). Make it the core of your first videos.
- **"Speech therapy"** has the lowest competition (34.8) and is up 133%. Use it as a supporting phrase in descriptions, not as a claim. Say "speech practice", never "therapy".
- **"Toddler learning video"** is the biggest US phrase (51K/mo). Put it in almost every title.
- **"Baby sensory video"** (85K, low competition 39.9) is a cheap-to-make spin-off series: slow, colorful AI animation with music.

vidIQ: Her Actual Script (Transcript)

Pulled from "Talking Time with Ms Rachel" (491M views, 30 min). It confirms the format with real wording:

- **Very slow:** roughly 75 spoken words per minute, about half the speed of a normal YouTube narrator, and much of that is repeated words.
- **Same micro-loop dozens of times:** "You say **go** and we'll see what happens... ready, set, **go**!... good job!" She sets up a reason for the child to say ONE word, pauses, then gives a reward (a toy pops up, a ball drops).
- **Target words are the simplest possible:** go, more, in, on, push, boom, duck, bye-bye, hi, night-night. Then 2–3 word phrases: "more swing", "I want more slide", "put him in".
- **Sound-making tips:** "b b b — lips together — bee".
- **Public-domain songs fill the gaps:** Five Little Monkeys, Five Little Ducks, Pop Goes the Weasel, Hop Little Bunnies, Baby Bumblebee, plus counting woven in ("how many are left? 1, 2, 3, 4").
- **Sign language and movement:** "this is the sign for monkey", "can you hop like a frog?", "pretend to be a train".
- **Warm close:** "night night monkeys, I love you", then "see you later alligator".

THE LOOP TO COPY (IN YOUR OWN WORDS)

Show object → "What's that?" → name it 3× → "You say ____!" → 2–3 sec pause → reward animation → "Good job!" → "Let's do more!" → repeat 2–3×

10

vidIQ: Competitor Landscape

The channels vidIQ rates as most similar to Ms Rachel (pop-music channels that showed up because of overlapping audiences were removed):

CHANNEL	SUBS	STYLE
LooLoo Kids	62.6M	Animated nursery rhymes
Super Simple Songs	47.0M	Songs (puppets + animation)
Bounce Patrol	34.0M	Live-action songs
NuNu Tv Nursery Rhymes	29.5M	Animated, Shorts-heavy
BabyBillion	22.3M	Animated early learning, Shorts-heavy
Little PIB Nursery	6.3M	Animated · fastest growing (+6.9% views / 30 days)
Danny Go!	5.3M	Live-action movement · +3.2% views / 30 days
PangPang Kids	3.4M	Animated SEL / songs
Little Bowbow Cartoon	1.9M	Animated nursery rhymes

The gap: the giants are almost all **song-first** (nursery rhymes). Ms Rachel is the only giant that is **speech-first** (talking, pausing, getting the child to say words). The AI breakouts in section 07 show that an animated, speech-first channel has room to grow.

10b

vidIQ: Parent Comments

Result: not enough data. YouTube turns comments off on every "Made for Kids" video, so the first search (toddler learning videos) found **zero** comments across 494 channels (credits refunded). A second search on parent-facing speech-tips channels found only 4 comment threads on 1 channel, with no repeated requests or complaints.

What it means for you: you won't get feedback from comments on your kids' videos. Get parent feedback another way: post **parent-facing clips on TikTok, Instagram and Facebook** (e.g. "3 words your toddler should say by 18 months"). Those allow comments and tell you what parents want next.

Game Plan: Your Faceless AI Version

Recommended starting plan (based on the vidIQ data)

- **Weeks 1–4:** 8–12 videos of **5–12 min** each, all "First Words / Learn to Talk" lists with your AI host. Example titles: *"30 First Words for Toddlers | Learn to Talk with [Host] | Toddler Learning Video"*, *"Baby's First 50 Words | Speech Practice for Toddlers"*.
- **Month 2+:** start **30–60 min compilations** made from the short videos. This copies how Ms Rachel earns most of her watch time.
- **Side series:** "Baby Sensory" videos (85K searches/mo, low competition), cheap to make with slow AI animation.
- **Every video uses the loop** from section 09, plus public-domain songs.

What carries over

- Title templates (keyword stacks: Baby/Toddler Learning, First Words, Learn to Talk), the runtime badge, the speech-bubble "Say ___!" thumbnail device, the long modular format, model → pause → praise, the hello/goodbye songs and public-domain nursery rhymes.

What must change

- **The host becomes an original animated character.** Ms Rachel's face and eye contact do much of the work, so you need a lovable character with a **locked look** (one outfit, one color, one voice) who looks straight at the camera with clear mouth shapes, because toddlers learn by watching mouths. Animal or friendly-creature hosts work well, and a hand-drawn/soft 3D style is safest.
- **Fully original:** no Ms Rachel name, outfit, logo, puppets, songs or "Songs for Littles" references in titles, tags or thumbnails. Only public-domain nursery rhymes or your own songs.

Risks to plan for

- **Made for Kids is mandatory:** no comments, no personalized ads (lower RPM), no notification bell. Growth comes from search and suggested videos, which is why the keyword titles matter so much.
- **YouTube's "inauthentic / mass-produced content" monetization policy** and its scrutiny of low-quality AI kids content. To stay monetizable, keep real teaching structure, one consistent character, original scripts and songs, human editorial review, and avoid near-identical templated uploads.
- **AI disclosure:** turn on the altered/synthetic content label where it applies.
- **Trust signal:** Ms Rachel is a real teacher. An AI channel needs a credibility substitute, such as scripts reviewed by a speech-language pathologist or early-childhood educator, mentioned in the description.
